

TwinCap

Twin nozzle bayonet cap for improved coverage

TwinCap bayonet caps improve spray coverage on difficult targets when used with appropriate nozzles. They are suitable wherever good spray coverage is essential, such as for potato blight and oil-seed rape fungicides, desiccation and blackgrass sprays.

- Allows higher flow rates to be applied without increasing the nozzle orifice size, allowing a finer spray quality to be maintained
- Twin 30° inclines forward and backward offer improved spray coverage on larger canopies and small upright plants
- Holds any two ISO standard dimension nozzles
- Can also be used with a single nozzle and a blanking nozzle (part number 30KBLANK), for spraying in one direction with a 30° incline
- Compact design minimises risk of nozzle damage
- Fits most popular nozzle bodies including; Hypro ProFlo, Lurmark, Teejet, Arag, Berthoud and Hardi
- Manufactured in tough polyacetal engineering polymer or PVDF (suitable for use with harsh defoliant and acidic spray solutions)
- Quick and easy to assemble, no tools required. Comes complete with sealing disc

Hypro's TwinCap is a simple, compact way of accommodating two spray nozzles back to back.

This design allows you to apply higher spray volumes without coarsening spray quality.

It also directs more spray into larger canopies and onto small grass weeds achieving better spray coverage.
